

TCRC PROJECT CONSULTANCY PROCESS

5 STEPS TO ROOF WATERPROOFING SUCCESS

1. Consultation & Project Appraisal

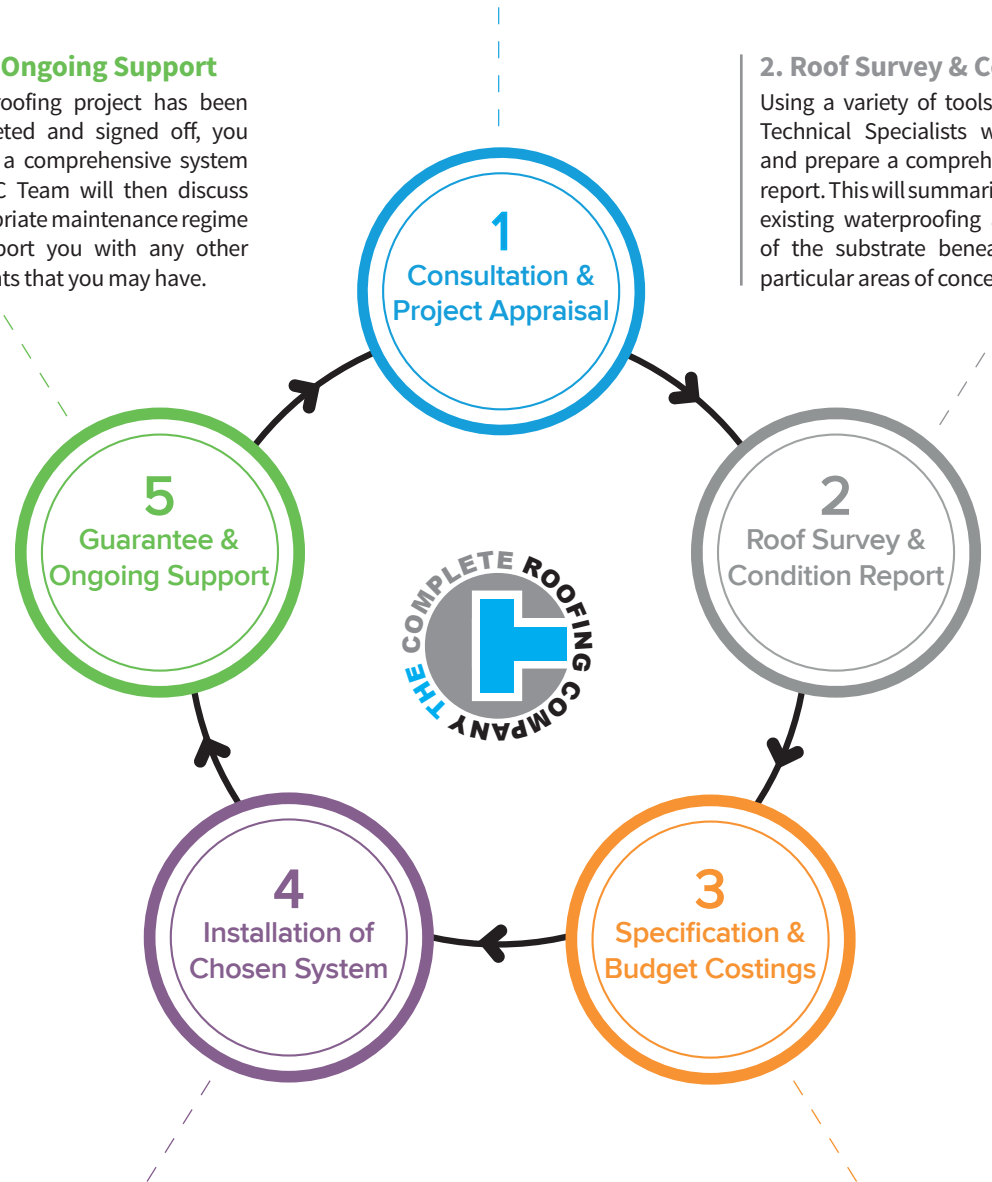

In this important initial step, we will discuss your project requirements with you along with any particular issues that are being faced. We will gain a better understanding of the building use and also discuss other important aspects such as budget availability and timescales.

2. Roof Survey & Condition Report

Using a variety of tools and techniques, our Technical Specialists will survey your roof and prepare a comprehensive, free-of-charge report. This will summarise the condition of the existing waterproofing and the composition of the substrate beneath, highlighting and particular areas of concern.

5. Guarantee & Ongoing Support

Once your waterproofing project has been successfully completed and signed off, you will be issued with a comprehensive system warranty. The TCRC Team will then discuss and agree an appropriate maintenance regime with you and support you with any other ongoing requirements that you may have.

4. Installation of Chosen System

Installation will then be carried out by our experienced team of fully trained and badged Operatives. Regular specification checks and quality control procedures will be carried out as the project develops and you will be kept fully updated on progress along the way.

3. Specification & Budget Costings

The facts and data presented in our Roof Condition Report will enable us to propose the best possible bespoke waterproofing solution to meet your individual needs. This specification will be provided with full budgetary costings and an estimated schedule of works.
