

TCRC Case Study: St. Mark's School, Bath

Resurfacing & Line Marking Solution for Multi-Academy Trust

St Mark's is a popular local secondary school situated in between the rolling hills of Fairfield Park on one side and the bustling and vibrant village of Larkhall on the other, close to the city centre of Bath.

Part of the Midsomer Norton Schools, Partnership, St. Mark's recently converted to a Multi Academy Trust, allowing more structural and refurbishment work to be carried out and increasing the capacity for students.

Integrated Project Specialists

This 2,000m² project was carried out by TCRC's Special Projects Division, and involved a comprehensive surfacing, kerbing and line marking solution.

The works initially involved preparing and overlaying the entrance area from the road to the reception using AC dense 10mm wearing course. The slabbed footpaths were then removed and rebuilt before being overlayed with AC dense 6mm wearing course. The same finish was applied to the concrete footpaths and suitable back kerb edgings and fencing were then installed. The school's tarmac footpaths were also overlayed with frames and covers raised accordingly.

Elsewhere the lower sports court was prepared and overlayed with AC dense 6mm wearing course and detailed line markings were then carried out to complete the multi-court sports areas and the car park.

The contract was completed ahead of programme and within budget. Both clients were very happy with the service and quality of installation provided and have since recommended TCRC for further works.

Project: St. Mark's C of E School

Location: Bath
